## Corevista The difference is clear

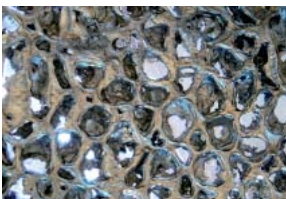

Bubble finish - backlit

Bubble panel

Honeycomb panel

Lava panel

Edge detailing

Clark & Fenn Skanska have been appointed as exclusive agents for the Corevista range of wall and ceiling panels.

This UK manufactured range of translucent polycarbonate panels for partitioning, doors, ceilings and floors give the designer or architect an aesthetic option for transmitting light to reception areas, auditoria or any " front of office" environment.

A unique variety of core options are available with typical panel thicknesses ranging from 15mm to 100mm. Full sets of data sheets are available and also test data from The University of Durham engineering laboratories on point - loading to 6.2KN.

These materials have both thermal and acoustic capabilities depending upon thickness and core density. Further information and data sheets are available on request.

Further information on Clark & Fenn is available at [www.skanska.co.uk](http://www.skanska.co.uk)
