The Barts and The Royal London Hospitals Project is the largest healthcare project ever procured under the Private Finance Initiative and involves constructing major hospitals on the sites of the existing Royal London and St. Bartholomew's Hospitals, together with refurbishment of architecturally sensitive buildings.

Skanska's design team provides full civil and structural engineering services to Barts Hospital including the design of foundations, the reinforced concrete frame, steelwork and shearwalls, together with the infrastructure design of drainage and external works.

Skanska's design team has worked with the construction team throughout the life of the project - from initial tender enquiry through to the construction phase - and has ensured a transfer of knowledge from previous healthcare projects to work towards Skanska's goal of continuously improving its projects. □
