Bentley Works

Application

In-house maintenance/repair of company owned plant fleet.

Crane Hire.

Fabrication.

Advantages

- 7.5 hectare dedicated facility.
- Overhead gantry crane.
- Central UK location.

Introduction

From our origins in the Doncaster coalfields in 1910, our dedicated facility at Bentley has spanned the years through the blacksmithing and forging operations of the 1920's to the new millennium workshop technology.

We are an Engineering and service centre which specialises in the fabrication, repair and overhaul of plant and equipment for a wide range of industries covering construction, mining, piling and ground engineering. We have established a reputation for high quality mechanical engineering, fitting and welding, with the ability to produce both light and heavy fabrication. We can offer this service world-wide from our United Kingdom location.

Our facility in Doncaster is centrally located to service all our operations throughout the UK.

Fitting Shop

We are able to repair and maintain a wide range of plant with our experienced workforce. We also

have the facility of a purpose built grit blasting and paint shop, using electrostatic airless spray equipment.

Typical examples of both mechanical and electrical work includes steel platforms, lighting gantries, handrails, guard rails, hydraulic power packs, drilling rigs, grouting plants, piling equipment, etc.

Specialist Welding and Fabrication

Our workshops are equipped with specialist machinery which includes rollers, presses, guillotines and automatic profile cutters. Welding is carried out by semi-automatic CO2 machines and manual arc. Our workforce is our strength in both experience and skills. We operate an in-house apprenticeship scheme.

Machine Shop

Our workshop provides a comprehensive facility for the overhaul of contracting plant, equipment and heavy transport used in the mining, construction and piling industries. Our equipment includes modern machine tools; including CNC

lathe and milling machines with all the supporting skills and facilities enabling us to prepare spare parts for plant to be repaired or re-built.

Field Service

Our team of field service personnel includes specialists in machine repairs, emergency breakdowns and inspections not only throughout the UK but also on a world-wide basis. In addition, we also provide tailor-made scheduled services and maintenance programmes to meet individual customer requirements. The field service team provides a full 24 hour 7 day a week emergency service.

Crawler Crane Division

For both internal and external hire from 30Te up to 80Te capacity comprising modern hydraulic units.

Stores

Bentley Works also operates an extensive stock management and depot storage facility, providing full support of spare parts for Company owned plant and all our on-site contract requirements both UK and overseas.
